🗀 PROJECTS

Pear.com

GitHub 🔗 **Deploy** 🔗

Pear is built with the reference website "apple.com". It is an ecommerce website for electronic products with an eye-catching UI where the users can buy various electronic items, with customizable design selections.

Features:
- Dedicated Admin Panel for adding and deleting products.
- Adding Products to chart.
- Login/Signup using Firebase

Tech Stack: HTML | CSS | JavaScript | React | Redux | Firebase

Areas of Responsibility:
- Designed Login and Signup Page
- Implemented Firebase Authentication
- Applied private route to Admin Page and Chart Page
- Implemented the functionality of showing user after authentication in the Home page.

A collaborative project built by a team of 5 Full stack web developers executed in 5 days.

Freshly.com clone

GitHub 🔗 **Deploy** 🔗

A website that allows user to get gourmet ready-made meals, prepared and delivered at their door step.

Features:
- Adding items to chart
- Filtering Sorting of items in the food page
- Login and Signup using local storage

Tech Stack: HTML | CSS | JavaScript

Areas of Responsibility:
- Designed and developed the landing page
- Implemented the feature to show user details on the landing page

A collaborative project built by a team of 5 members in 5 days.
